

7.0 POTENTIAL FUTURE SITE ACTIONS UNDER CLRRA

FRA completed the remedial activities called for in the *Revised Response Plan* (Frey, 2006a) and was issued a Certificate of Completion by DTSC in April 2014. As referenced in Section 1.0, DTSC required FRA to complete additional testing and remedial work in 2016-2017.

In the future, should there be an unexpected discovery of PCBs during or after Site development, those PCBs will be addressed as provided for in the two Response Plans (2006 and 2016) previously approved by DTSC and USEPA and by providing USEPA and DTSC with prompt written notice. Financial responsibility for any future Site work will be determined in accordance with California Health and Safety Code (HSC) Section 25395.81(a)(1) with DTSC recovering costs from the generators of wastes and the former operators and owners of the sewage treatment plant formerly located onsite in accordance with the CLRRA Agreement executed by DTSC and FRA.
